# Figure 2. Difference–in–Differences: Border–Sensitive vs Non–Border–Sensitive Diseases

A. Z–scored notification rates
Border–sensitive (n=9) vs non–border–sensitive (n=38)

B. Observed/Expected ratios by group

DiD coefficient (covid × border–sensitive): −0.50 (95% CI −0.90 to −0.10, p = 0.016). Pre–trend test: NS.
